This summer you have the opportunity to attend a science-based university located in the heart of London. You will study with University of Notre Dame students conducting hands-on experiments and experiencing real world industrial training using the state-of-the-art carbon capture pilot plant.

http://www3.imperial.ac.uk/chemicalengineering/discovery
The credits may be approved by your major faculty advisor as a Major-Approved or Approved Elective.

Generally summer programs aren’t eligible for Financial Aid, however, if you are a Pell Grant recipient you may apply for Gilman Summer Scholarship (http://www.iie.org/en/Programs/Gilman-Scholarship-Program/Eligibility). Or you may look into eligibility for a student loan with your lender.

Since funding options are limited the College of Engineering and School of Chemical and Biomolecular Engineering are offering partial funding.
